

The VoiceLine XJ200 Wi-Fi Handset enables users to place and receive low-cost calls over a Wi-Fi network.

The VoiceLine XJ200 Wi-Fi Handset:

- Allows users in corporate, residential and public Wi-Fi network environments to benefit from VoIP calling
- Complies with both the 802.11b and 802.11g standards for Wi-Fi LANs
- Supports value-added features such as VoiceMail, Caller ID and call forwarding

Opportunities for Savings

The XJ200 Wi-Fi Handset enables users to place and receive low-cost phone calls over Wi-Fi networks. Users no longer need to access a wired network to benefit from VoIP calling. Callers can save in any number of Wi-Fi network settings, including:

• Corporate Environments

Many small businesses rely on the flexibility of Wi-Fi networks to meet their ever-changing infrastructure requirements. Net2Phone enables these companies to utilize their Wi-Fi networks to save on communication costs.

Larger businesses are increasingly using Wi-Fi networks to extend their wired networks to off-site/telecommuting employees in home and satellite offices. With this solution, corporations can reduce the communication costs associated with establishing remote offices.

• Residential Settings

Users can now utilize their home Wi-Fi networks to save on their telephone calls.

• Free Public Hotspots

Callers can take advantage of the rapidly growing number of free public hotspots to make and receive low-cost calls when they are away from their home or office.

Standards-Based Compatibility

With the XJ200, calls can be made through Wi-Fi gateways and access points that comply to either the 802.11b or 802.11g standard. Both standards apply to Wi-Fi LANs operating in the 2.4 GHz spectrum.

Feature-Rich Calling Solution

The XJ200 enables both inbound and outbound calling and allows users to choose telephone numbers from the U.S., U.K., Canada and the Netherlands. The XJ200 also features:

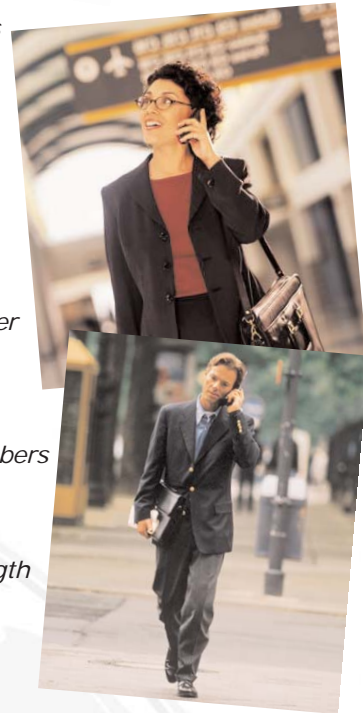

- Hotspot scanning capabilities, revealing SSID, signal strength and WEP
- Set up and storage of multiple network profiles
- Automatic connection to available Wi-Fi networks based on designated profiles and signal strength
- Increased portability with cradle-free, cell phone-style charging

Additional XJ200 calling features include:

- VoiceMail
- Caller ID
- Call forwarding
- Call blocking
- Call return
- English or Spanish language selection

Product Specifications

- Dimensions: 5.0" (H) x 1.8" (W) x 0.8" (D)
- Weight: Approximately 105g
- Battery: 3.6v, 1350mAh lithium
- Battery Life: 3.2 hour talk time, 21-23 hour standby
- Display: LCD, 112 x 64 (backlit)
- Notification: Ringer/Vibration
- Ports: Earphone jack
- Power Supply: 110v/220v auto switching charger with 110v/220v adaptor plug
